

1. Go here: <https://www.python.org>

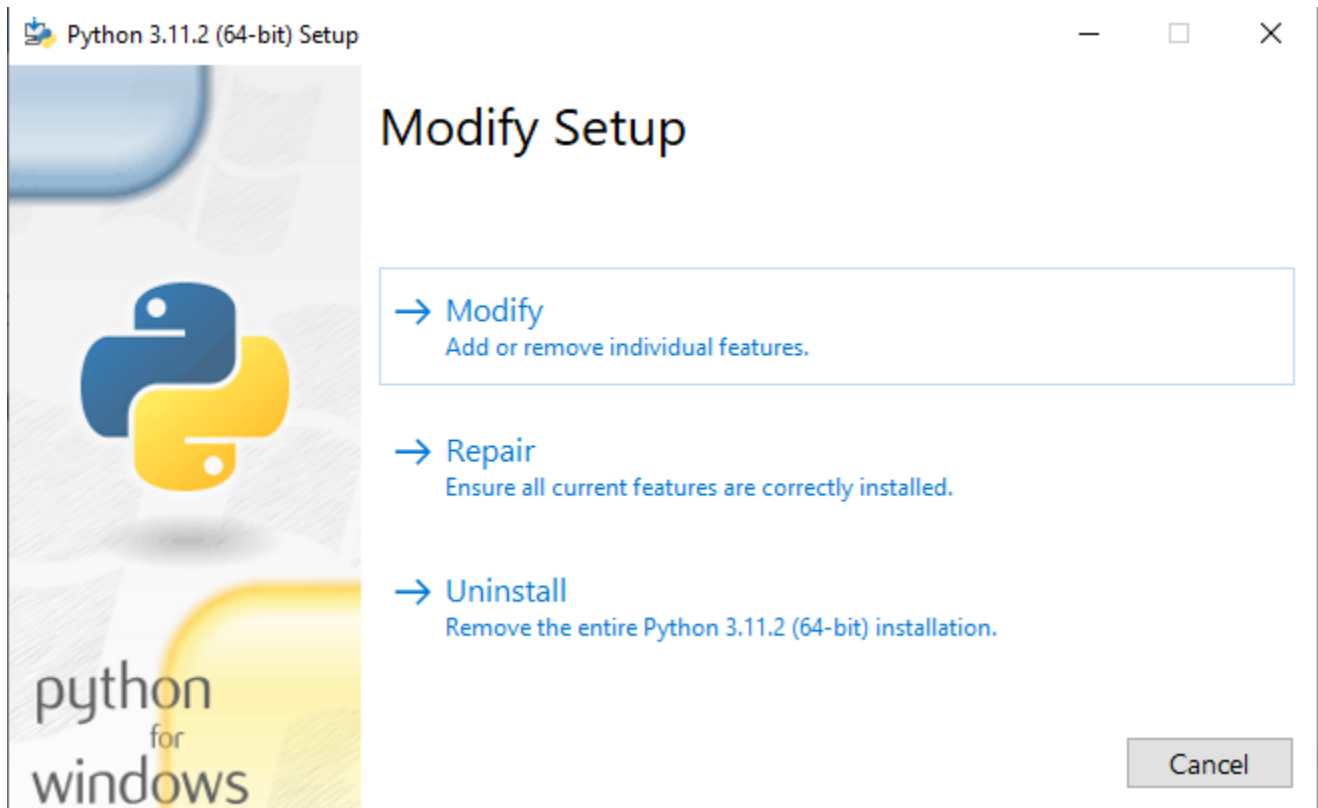

2. Click **Downloads** then the **Python 3.xx.x button** (the most current version will show):

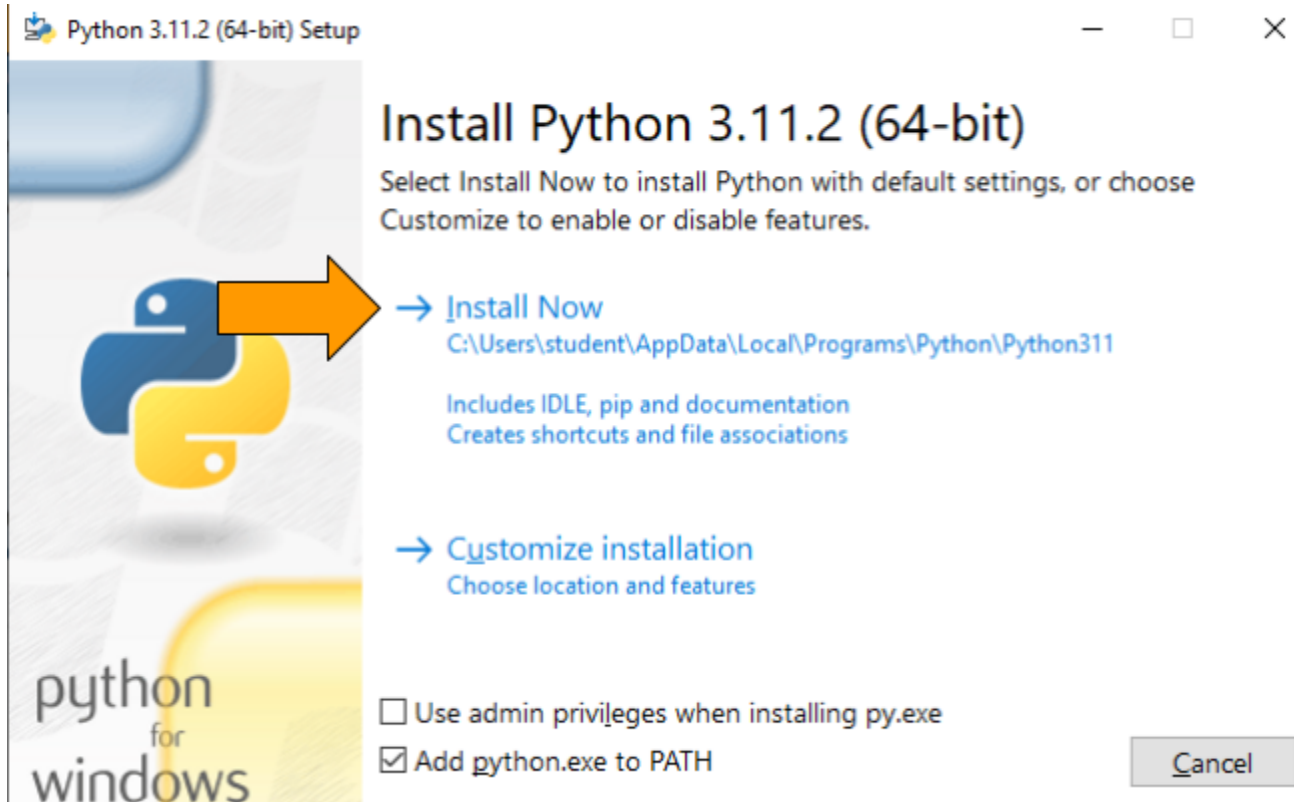

3. After the file downloads, run it and you should see the window below; **UNCHECK** the first box and **CHECK** the second box:

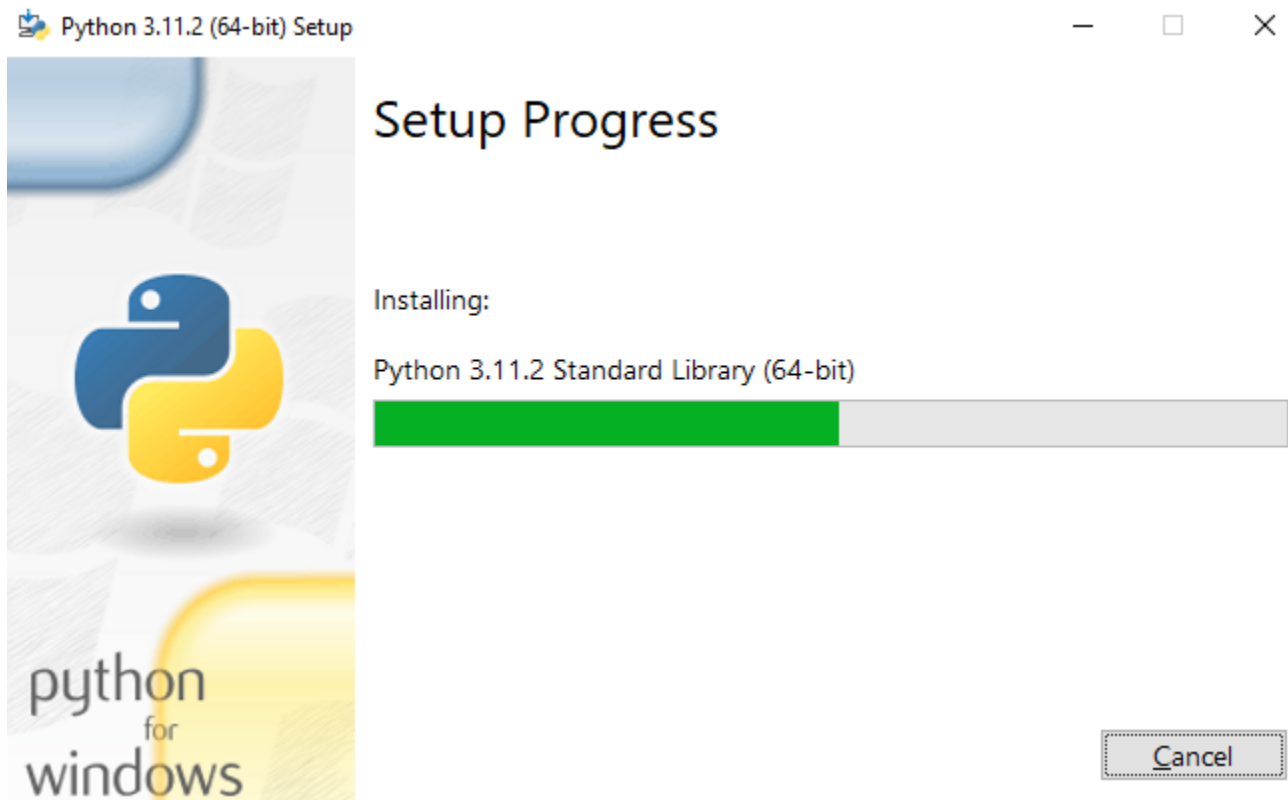

**NOTE!** If you see the following **"Modify Setup"** window instead of the window above, then **Python is already installed** and you should hit **Cancel** and skip all remaining steps.

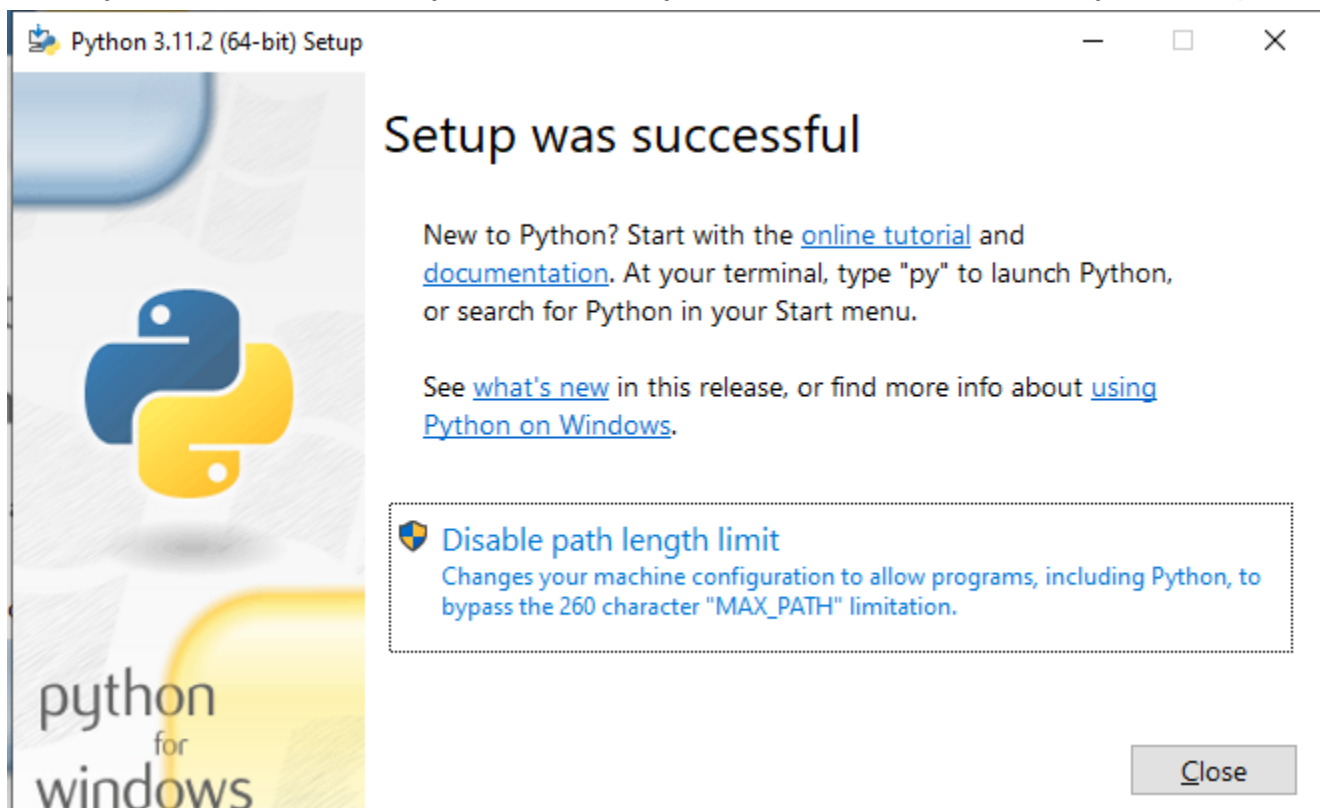

4. Click the **Install Now** button:

5. Give it about 1 minute to install...

6. When you see this window, you're done! Python has been installed on your computer:

7. Click on **Close** and you can now run Python programs in PyCharm.
